

AGENT OPERATIONS DASHBOARD

How the agent researches, writes, tests, and ships the weekly women-in-AI report

A live view of the autonomous research pipeline — covering **women & AI** across research, representation, and the featured healthcare-R&D track. Every Monday at 09:00 CST it picks a topic, gathers cited statistics, drafts the report, runs an independent QA review, and emails the result to the Medtronic team.

Latest report Week 10 · 2026-07-13 Women founders in AI startups: funding share

1%

of US VC funding went to all-women founding teams in 2024 — the lowest since 2017, even as the AI-inflated headline hit a record (PitchBook)

Key observations the agent surfaced

- Female-founded startups took a record **27.7% of US venture value** in 2025 — but **two-thirds went to AI**, and Anthropic + Scale AI alone took >\$30B.
- Strip out those two and female founders raised **\$42.8B — less than in 2021 or 2022**. The record is a composition effect, not broader access.
- All-women teams** got just 1% of US VC (2024); globally, **2.3%** of the \$289B deployed. Deal counts fell a **fourth straight year**.
- The honest gauge is the **all-women-team share**, not the AI-inflated top-line a single trophy round can move.

27.7%

US VC value to ≥1-female-founder startups (record)

PitchBook 2025 · \$73.6B

\$42.8B

ex-Anthropic + Scale AI — below 2021–22
